This includes the ability to add notes and comments to the drawing in a way that is seamless to the user. (video: 6:25 min.) Dynamically change the application language for the current drawing while the document is being edited. This is known as native Markup Assist, and is available when editing a drawing that is loaded into AutoCAD through a ZIP file. (video: 1:06 min.) Specify the range of the drawing that will be editable by the editor, and enable the viewer to view only the selected range. The new import and Markup Assist capabilities make it possible to create accurate representations of the information you need to communicate quickly. You can import the information directly into the drawing using the default Markup import feature. Alternatively, you can download and import a PDF file containing the information, and then make changes to the drawing directly in the application. The information can be comments, drawings, parts lists, product data, technical drawings, or other information. The marked-up drawing can be shared or embedded in a web page, web application, or even in a PowerPoint presentation. Drawing APIs: Create, open, and save files from

In addition to the existing project types, such as standards and drawing templates, you can now create custom project types. This opens up new opportunities to build and share drawings with other users by sharing the new custom project type. This will be available in AutoCAD 2023. Customization: Expand the ability to customize the Command Shortcuts palette.
