AutoCAD Crack+ For Windows [Updated] 2022

AutoCAD is mostly used for drafting and creating simple geometry. It does not have the features of AutoCAD LT, which is designed to be a much less powerful and easier-to-use version of AutoCAD that was aimed at beginners. AutoCAD LT is made for creating floor plans, interior layout drawings, home and landscape designs. This article describes how to use basic drafting tools in AutoCAD, as well as how to use the existing drawings in the drawing file. Check out the following pages: How to draw lines and angles with a mouse in AutoCAD Use the Pen tool to draw lines and angles To draw a line with a mouse, first go to the Home tab. Then go to the Drawing panel and click the Pen tool. In the Pen window, choose AutoCAD Graphics from the View dropdown menu. Click the Properties tab and then the Points to Draw property. This will tell the pen tool to draw straight lines by default. Then click the Flatten button in the Properties panel. This will remove the arrowheads from the points, and cause the line to be straight (not curved) Now you are ready to start drawing lines with your mouse. Begin by drawing a line by simply clicking and dragging. If you are drawing a line in the direction of the pointer, the line will automatically turn to match the direction of your mouse movement. If you are drawing a line perpendicular to the direction of the pointer, you must click and drag your mouse to the direction you want the line to go. Now that you have some practice, you can use the same techniques to draw an angle. Hold down the Ctrl key and click and drag to make an angle. If you hold down the Ctrl key, you will start to rotate the line as you click and drag. To make a 90-degree angle, click and drag straight into the center of your line. To make a 45-degree angle, click and drag one way, and then click again and drag in the other direction. To make an angle of 60 degrees or greater, click in the center of your line and then click and drag away from the center. How to use the Rectangle Select tool to draw a rectangle To create a rectangle, first go to the Home tab. Then click the Rectangle tool in the Draw panel and in the Rectangle window, choose Line from the View dropdown menu. This will start a rectangle by default.
