Music and Greetings from the Cloud.. XStream Playout Software is the perfect solution forÂ .Q: How can I use an external library, but still work in an error prone environment? I am currently working in a company where I use a library that I am not allowed to change. A very rough sketch of my library: DLL_LAYER.h
bool DLL_Library::doSomething(); DLL_LAYER.cpp bool DLL_Library::doSomething() { // Do something very important } So basically, my company will use this DLL layer and won't change it for some months, which makes sure the library can be used by every customer with no problems, but for me personally it is not the best practice. I would like to either (1) make a library that only contains doSomething() (e.g. because it would be acceptable for my company), (2) write a DLL that uses the original library and checks if the path is correct (somehow), or (3) split the DLL in multiple files and call the correct function depending on the customer's path. My question is: How could I do that in a type safe fashion? Thank you very much! A: I'd
