Chalus (3).pdf [a4]Â .This invention relates
to a cleaning apparatus and more
particularly to an improvement in wiper

strip cleaning devices. The normal method used to clean the wiper strip of a windshield wiper was a wetted sponge which is ordinarily sponge saturated with a cleaning solution. The strips on the entire surface of the windshield had to be carefully wiped with the wetted sponge, which is very time consuming and does not provide uniform and complete cleaning. With the increasing cost of labor in recent years, it has become very desirable to minimize the amount of time required to clean the windshield. In order to clean a windshield wiper, it has been the practice to detach the wiper bar from the wiper arm, secure a windshield cleaning implement to the end of the wiper bar and then wipe the windshield. The wiping operation has been accomplished by passing the wiper bar back and forth across the windshield surface. It has been found that in order to wipe the wiper strip thoroughly, it is necessary to clean both the forward and rearward portions of the

strip. Thus, it is desirable to have a means for cleaning both the forward and rearward portions of the wiper strip in a single operation.

Q: Android... How to test my app only on Kindle Fire 4? I have developed an app on android for my App Store. Now my client says that his app must be compatible only on Kindle Fire 4(5 inch screen). I want to see only how my app functions. So, I have a black screen with a message saying, Sorry, your device is not compatible. I can change my manifest file and set minimumSdkVersion to 10, but this is not enough. How can I see only my app on Kindle Fire 4? Thanks!

A: You can't easily do this. I don't know of any other way. You may be able to access the Kindle Fire SDK or something that might give you the right bits to help you to do what you need. Oh, you say you can change the minimum SDK version in the manifest?

That's
