Get download instant Gta San AndresoUpdate: I originally thought that Airplane Mode meant exactly that. Turns out I was wrong, sort of. It really does mean airplane mode. But, the device only "turns off" wireless data from the carrier. So, theoretically, wifi could still be on. You turn Airplane Mode on with the slider and press the power button to turn off the screen and unplug. You turn it back on by pressing the power button again. Instead of turning off all wireless data, it only switches off the data from the carrier. So, for example, if you're on AT&T (or T-Mobile), you can still use AT&T wifi hotspots. It won't help you to use Verizon's stuff, but it will let you use your own. Oh, and it won't work on anything cellular-only. It's a software only thing. You still need a data connection to use it. Original story: An operator of several Android-powered WiFi hotspots is offering a hardware-based solution to the problem of turning off the data connection without turning off wireless. As long as a device is connected to its carrier, turning off the device's screen via Airplane Mode will disable data usage, regardless of what cell provider the device is using. It's a clever bit of reverse engineering, because a carrier that handles both voice and data traffic would likely want to flip its own cellular switch to avoid losing any voice traffic. Before anyone laughs off this as a stupid idea or that it has been tried, it is Apple which has been trying for years to get carriers to add the option of turning off data traffic to their devices on WiFi with no success. And, if you have any doubt about the efficacy of this idea you can point to Apple's track record of awful hardware decisions: the design of the iPhone 4, the lack of a SD card slot on the original iPad, the iPad 3's Verizon-exclusive 3G access, etc. It should go without saying that a device plugged into the wall that isn't power connected is probably not going to last as long as one that is. It's probably going to cost you a bit more, too. out the major issues that need to be addressed; so check out the three over c6a93da74d
