The last update to Photoshop 3D, Photoshop 3D Release 2016, was released 14 months ago, and we estimate that about 50% of the users have downloaded that update. This update introduced many continuous improvements to the user experience, including the removal of some of the system requirements, performance improvements and of course the removal of the 3D mode. We are taking the opportunity to clean up as well as redefine Photoshop 3D. We have already removed the functionality from the plug-in and the Photoshop CS6 installer. We have also made it clear that the last update of Photoshop 3D was the last. In addition, we will be concentrating on the updating and improving the content creation experience (Video, 3D, etc.) and will remove the 3D theme from the application. Finally, we will be releasing a new version of the application each quarter to deliver updates specifically related to improving the user experience.
